Split Process

Before going to production, the split rule file needs to be tested. The locations of splitting input and output files are defined in **Split Options**.

To test the rule file:

- Select **Split** from the **File** menu.
- Select a test data file.
- Click the **Open** button.
- The **Split Result** dialog opens.

- Click the **OK** button.

To ensure the rules are identifying and separating the documents correctly, browse the documents with a text editor. The first file created by FTSplit contains all the unwanted pages. This file is always created, even if there is no unwanted page data.
