### Tools - Font

The Repaginator provides the option to change the display font for the input data file and the repaginated output. You **MUST** use a mono-spaced font, such as Courier New or LtrGothic.

To change the font in Repaginator:

- Choose **Font** from the **Tools** menu.
- In the **Font** dialog box,
  - **Font** - select a monospaced font type.
  - **Font Style** - font should be Regular or Bold.
  - **Size** - select the size of the font. 10 or 12 point if preferable for most data files.
  - **Effects** - do not Underline, remove by unchecking the Underline box.
  - **Color** - select the color of the text.
  - **Script** - determines the writing system of the print stream in the Repaginator window. Western for English and most Roman fonts.
