Arranging Objects

Multiple Object Sizing

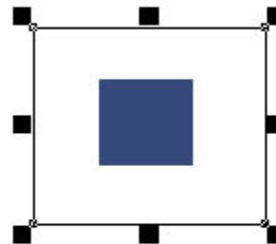

Resizing objects to a uniform size is quickly achieved with Print-on-Demand's size function.

There are four options available when resizing objects:

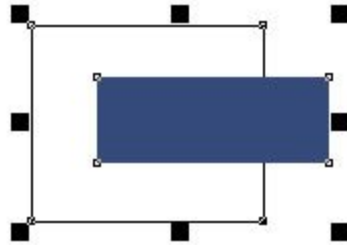

- To widest - resize all objects to the same width as the widest object.
- To narrowest - resize all objects to the same width as the narrowest object.
- To tallest - resize all objects to the same height as the tallest object.
- To shortest - resize all objects to the same height as the shortest object.

Following is one example of adjusting the smaller rectangle to the same size as the bigger one.

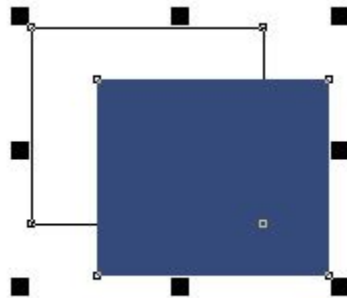

- Select the objects to be sized by clicking on each of them while holding the SHIFT key, or by drawing a marquee around the objects. Two or more objects must be selected.

- Choose Size from the Edit menu, and then select To widest option.

- Choose Size from the Edit menu, and then select To tallest option.
