Split Process

Before going to production, the split rule file needs to be tested. The locations of splitting input and output files are defined in [Split Options](#).

To test the rule file:

- Select Split from the File menu.
- Select a test data file.
- Click the Open button.
- The Split Result dialog opens.

- Click the OK button.

To ensure the rules are identifying and separating the documents correctly, browse the documents with a text editor. The first file created by FTSplit contains all the unwanted pages. This file is always created, even if there is no unwanted page data.
