The data sent to FormTrap in Print Line mode is unchanged from the original application. Unlike Records mode, the purpose of Print Line mode is to extract data from a print stream as it is generated by the application. FormTrap achieves this by mapping areas of the print stream data for print line extraction.

The screenshot shows the FTDesign software interface. The top window displays a design for a 'TAX INVOICE' from TCG Information Systems. The design includes the FormTrap logo, company details, and a table for invoice information. Below the design is a table with columns: CODE, DESCRIPTION, QUANTITY ORDERED, QUANTITY SHIPPED, QUANTITY B. ORDER, TAX CODE, UNIT PRICE, and VALUE (Incl. G.S.T.).

CODE	DESCRIPTION	QUANTITY ORDERED	QUANTITY SHIPPED	QUANTITY B. ORDER	TAX CODE	UNIT PRICE	VALUE (Incl. G.S.T.)
------	-------------	------------------	------------------	-------------------	----------	------------	----------------------

The bottom window shows the extracted data for the invoice, with fields highlighted in green. The data is organized into sections: Dept, TCG INFORMATION SYSTEMS, BILL TO, and SHIP TO.

Dept: 01

TCG INFORMATION SYSTEMS
Level 3, 53 Balfour St
Chippendale NSW 2008

BILL TO:
Eucalyptus Solutions
Level 3
123 Branch Road
Flowers, TER 9999
Fax No : 02 9310 5172
Email: support@tcg-is.com.au

SHIP TO:
Eucalyptus Solutions
Level 3
123 Branch Road
Flowers, TER 9999

Print line extraction is the process of identifying fields in the print line data and linking them to the field names allocated to variable text objects on the form. Data is identified according to its position on a page in the print stream and linked to the form by highlighting areas of sample text. This is called print mapping.
