Multiple Object Size

Resizing objects to a uniform size is quickly achieved with FTDesign's size function.

There are four options available when resizing objects:

- **To widest** - resize all objects to the same width as the widest object.
- **To narrowest** - resize all objects to the same width as the narrowest object.
- **To tallest** - resize all objects to the same height as the tallest object.
- **To shortest** - resize all objects to the same height as the shortest object.

Following is one example of adjusting the smaller rectangle to the same size as the bigger one.

- Select the objects to be sized by clicking on each of them while holding the **SHIFT** key, or by drawing a marquee around the objects. Two or more objects must be selected.

- Choose **Size** from the **Edit** menu, and then select **To widest** option.

- Choose **Size** from the **Edit** menu, and then select **To tallest** option.
